

VHF AIRBAND TRANSCEIVERS

IC-A120 IC-A120E

Top Performance Mobile Airband Radio

with Active Noise Cancelling and Bluetooth® Wireless Connectivity

High Visibility, Simple Operation

The full-featured LCD allows for high-visibility and clearly shown alphanumeric characters and icons. Programming memory channels and other radio settings can be simple thanks to the front-panel touch screen. These optimizing functions can also be restricted, depending on the radio settings.

Optional Bluetooth® Headset Connectivity

With the optional V-T-100 Bluetooth® unit, the IC-A120E can be used with a thick-duty wireless Bluetooth® headset. Also, using the optional VHS-2 Bluetooth® headset, the auto-lock function is available.

Active Noise Cancelling (ANC)

The newly advanced ANC reduces background noise in the received and transmitting signals. This function is effective in extremely noisy airport environments full of aircraft noise. The automatic noise cancel (ANC) reduces sudden-type noise such as engine ignition.

*The ANC and ANC functions cannot be used at the same time.

IP54 Dust Protection and Water Resistance

The IC-A120E has IP54 dust protection and water resistance. This construction allows for use in open-air vehicles.
